

Understand the home beyond the visit.

Continuous indoor-environment monitoring, clear client access and professional reporting for damp, mould, ventilation and healthy-home work.

See what keeps returning between appointments.

DASHBOARD · FINDINGS · REPORTS

A LONGER EVIDENCE WINDOW

A visit shows a moment. Aeroshi follows what comes next.

Room conditions change with occupancy, sleep, cooking, heating and ventilation. Monitoring makes the repeating pattern visible.

01 / MONITOR

Follow the rooms.

Temperature, humidity, CO₂ and particles during normal use.

02 / UNDERSTAND

See what returns.

Separate isolated events from recurring room patterns.

03 / REVIEW

Decide what follows.

Combine the measured evidence with professional judgement.

Time adds context.

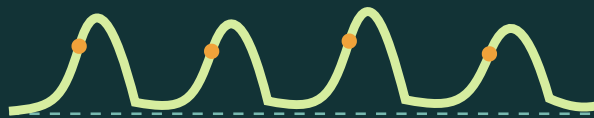

The measurements do not replace the inspection. They show whether a concern is isolated, recurring or different between rooms.

A REAL ANONYMISED RESULT

A bedroom kept building up CO₂ overnight.

REPEATED OVERNIGHT PATTERN

CO₂ rose after bedtime, then cleared slowly.

72%

less average nightly time above 1,000 ppm on later matched nights

01 / FIND

The pattern repeated.

CO₂ exceeded 1,000 ppm on 20 of 24 February nights with enough overnight data.

02 / CHANGE

One routine changed.

The household altered its bedtime ventilation routine while monitoring continued.

03 / CHECK

Later nights looked different.

On nights with similar outdoor conditions, average high-CO₂ time fell from 120 to 34 minutes.

AVERAGE NIGHTLY TIME ABOVE 1,000 PPM

BEFORE

120 min

AFTER

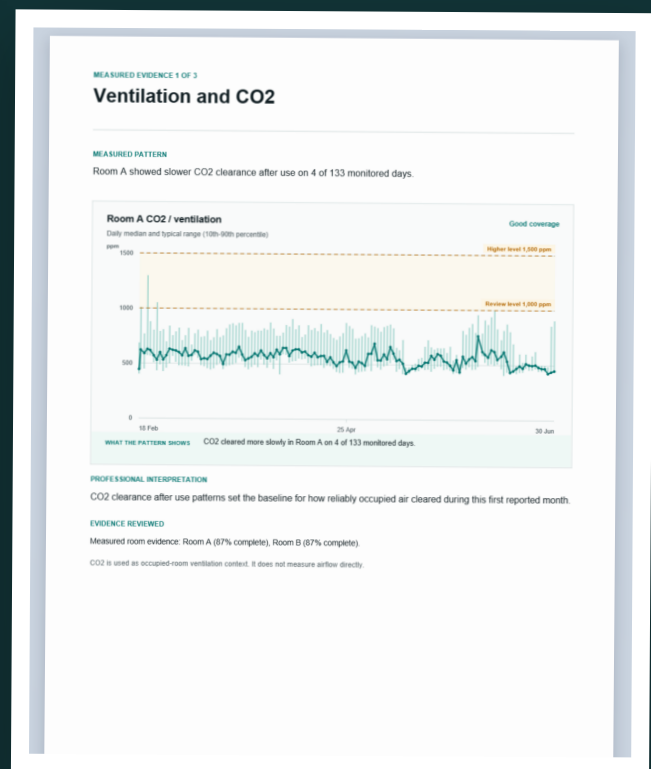

34 min

The comparison supports the practical result. It does not prove that the routine alone caused the change or certify a health outcome.

FROM PATTERN TO PROFESSIONAL RECORD

Evidence prepared. Judgement stays with you.

Once the pattern is visible, Aeroshi assembles the measured story into a consistent report. You add the inspection context, recommendation and limitations.

01 / AEROSHI PREPARES

The measured evidence

Coverage, room patterns, comparisons and the clearest changes in the selected period.

02 / YOU ADD

Professional meaning

Inspection findings, client history, recommended action and important limitations.

03 / THE CLIENT RECEIVES

One clear record

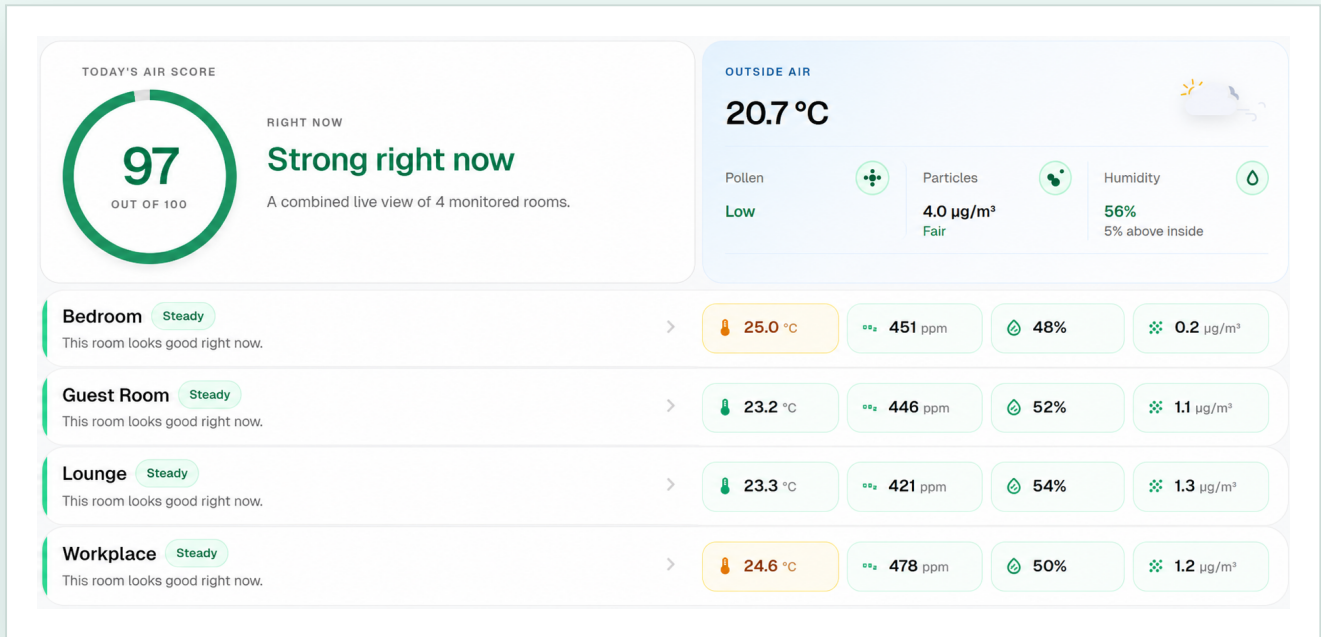

A consistent PDF without rebuilding charts or laying out a Word document by hand.

Offer longer-term evidence without monitoring another portal or rebuilding the client report by hand.

THE EVIDENCE STAYS ACCESSIBLE

One view for the whole home.

The final evidence does not disappear into a PDF. The client can see their rooms without being asked to interpret an engineering dashboard.

RIGHT NOW

See the rooms.

A plain-language summary of current conditions across the home.

OVER TIME

See the pattern.

Recurring ventilation, moisture, comfort and particle behaviour.

AFTER ACTION

See what changed.

Reports stay with the property so later periods can be compared.

The evidence stays visible between reviews.

The household remains informed while the practitioner retains the professional judgement.

AROUND THE ASSESSMENT

Add room history to the assessment.

Place the monitors before the first visit or leave them afterwards. Aeroshi shows how the rooms behave between appointments, giving you more than a single snapshot.

01 / PLACE

Fit monitoring around the visit.

Send the monitors ahead or leave them behind when conditions need longer review.

02 / FOLLOW

See what happens between appointments.

The dashboard and reports reveal recurring ventilation, moisture, comfort and particle patterns.

03 / REVIEW

Strengthen the professional judgement.

Use the room history to focus the conclusion, recommendation and next action.

ONE HOME · TWO MONITORS

One home. £299.

Two indoor-air monitors, setup, platform access, automated reports and three months of guidance. UK delivery included.

No subscription required. Larger deployments quoted separately.
